

Air Quality Staff

March 28
2017

After a brief review of the VW Mitigation Plan with the help of your wonderful staff Deanna, she took the time to educate me on what is in the plan.

I could see right away what is missing. There is not a component on Health and Education. This area is so important to all the citizens of Delaware as is all over the world.

DNR EC has been ~~has~~ ^{got} regulating and not educating it citizens for years.

Is history going to repeat
itself all over again.

The Diesel engine was
first developed in Germany
by Rud Ruckhoff Diesel for the
military.

I also think you need
to contact the local V.W. dealerships
and partner with them on
how the money should be spent
in Delaware.

If you don't do outreach
and Education on Health impact
