Subject: Electric car bill

Mr Garvin, it has come to my attention that you are trying to adapt to California new law that will impose a threat to our state as you have seen in California they currently have power grid problems and unfortunately this is causing issue for the American people, this honestly isn't right that soon we will have to buy these honestly piece of junk car that runs off electric they are far more worse then the standard gas powered vehicle we have as of today, it is very unfortunate that you are actually seeing it as a good thing when it's honestly going to hurt the people that you are suppose to help and represent as the Delaware governor. In all honesty I don't believe it is right we the people should have a choice to drive what we want this should not be in other terms jammed down our throat and forced to have something that a lot of us do not want. You and denrec should really look into this farther. This will also cause issues with taxes on the road because fuel cost will go down if we are slowly forced to be put in to these vehicles and in all honesty the American people have a hard enough time living pay check to pay check from taxes a year and now with this the road cost will be shoved in our taxes we really can't afford to do something with this nature we also can't afford to put in a \$16,000 battery in the vehicle after the warranty expires then we will be stuck with no vehicles this will end up pushing more Delaware house holds to leave Delaware which we also don't need. So please really sit and think this over before you really anger a lot of the Delaware folk in our beautiful state

Sincerely
- Randy Collison
