Regards, I will not go on endlessly about what a ill conceived proposal this is, just the infrastructure alone is unrealistic.

There are vast graveyards in Europe of discarded government vehicles no one wants or can afford to replace batteries.

Where will the sites be to store these future useless batteries, never a comment on that result.

In Germany many underground garages will not allow electric vehicles, if they catch fire you just have have let them burn out. While emitting deadly gases as a by product.

Hopefully reason will prevail.

Respectfully

James Carbone
