Subject: Adopting California's zero-emission vehicle standards

Gentlemen,

I appreciate the intent in adopting California's zero-emission vehicle standards for the state of Delaware and I'm sure that with the progression of time, driven by a community and infrastructure ready for it, it will be affected by the natural evolution of things.

However, I do not believe that forcing the adaptation of the standard on the citizens of Delaware is a wise and prudent or good thing.

I'm sure that you have been provided ample information as to why many if not most feel it not to be beneficial for the State's citizens but if necessary, I would be more than happy to supply you with a plethora of reasons against it. My contact information is below.

As an alternative, and at minimum, we should see how the experiment works in California before we try to implement something that is untested and possibly could be as much of a failure as the legalization of recreational marijuana in Colorado.

Thank you for your attention in this matter and I'm sure you are well aware of the potential results of your actions regarding this come election or appointment time.

Yours truly,

Bill Pfaffenhauser
