Subject: DNREC Zero Emissions

I am vehemently opposed to the adoption of the regulations the Delaware Natural Resources and Environmental Control are planning which will mandate the banning of gas-powered automobiles by 2035.

A mandate with this magnitude of impact on the economy of the State should not be adopted by regulations decided and enforced by a bureaucratic agency. It should be adopted by elected legislators through public discourse.

Fast tracking such an impact full initiative is bad practice. It's divisive. It's wrong.

Please change course. Send this to the legislature as a bill and let your constituents be involved in the process. We deserve more from elected officials.
