I'm very much against this idea. People can't afford the electric vehicles & we don't need to put many people out of work due to this change. The electric grid can barely handle what we have now, how in the world can we expect it to handle all the new demands? We're already in trouble with gas because of the measures taken by the Biden administration! Wind farms are destroying our waterways & fishing industry along with the tourist business ( who wants to look out on the ocean & see gigantic turbines?)& solar has its many problems, not the least of which parts are made in China! California is losing residents right & left because of the drastic changes they keep making. Why would we want to follow them? Why don't we have a referendum with all the residents to see how many want these things instead of a few politicians deciding what we all should do? I'm just beyond upset with what is happening in our state & the United States of America  
!
