Subject: Re: EV

Good morning Mr. Garvin,

The EV bill is not the solution to our energy needs in Delaware or the USA. I've researched this product and found that there are serious problems.

The batteries explode and the flames are not quenched by water, batteries cost 10,000 to replace, the electric grid is overwhelmed already, and it takes hours to recharge the batteries.

All plastics are created from process of gas. We will not stop processing gas to crest plastics.

I've looked into solar energy and found that the Electric companies are pushing to stop the rebate and savings from installing this product.

Lobby by big business is not beneficial to the citizens of Delaware. We are the ones who pay the taxes to keep you fed & this state running.

Thank you for your consideration in this matter.

Sincerely,
Kathy Arnold
Townsend
