Subject: Zero Emissions Mandate

Dear Governor Carney, Secretary Garvin, Senator Hoffner and Representative Carson

I want this email to be part of the record in opposition to the "zero emissions" mandate copying the California law.

I attended all of the virtual meetings in which my questions and so many others were not answered. There were many experts opposed to this giving statistics and testimony that this will not work and why, especially in the current state DE is in.

Electric is at an all time high, inflation has reached unprecedented numbers and people are struggling to make ends meet. This will be a costly program no doubt to the taxpayer. Most don't even know this is being pushed.

California continues to have outages since they instituted this "law". You are pushing this through without having enough data or even intelligent answers to the experts.

Businesses have shut down for good in this State due to the lockdowns you mandated, shortages in food and medicines, unemployment increase, pre-existing electric shortage in this State with an unprecedented increase in cost. With all of this, you want to add vehicles to the already burdened electric infrastructure?

We are adamantly opposed to this zero emissions mandate.
