Subject: Zero emission proposal

Do not enact the zero emission standards. This will kill Delaware's economy and will impact people of color in underserved communities the most.

This is also impractical. The technology and infrastructure to do this does not exist. And the batteries are toxic when depleted in 8 years. How will Delaware's farmers harvest crops? You need gas powered engines to do this.

How are Delaware's poor people supposed to afford an EV when they can't afford food?

What would you do with the depleted batteries?

Have you thought this through?
