Subject: Zero Emission Vehicles Standard Mandate

Secretary Garvin,

I oppose and do not support this mandate - I feel at this time we desperately need to get our economy back on track, put the correct items/infrastructure in place that would ultimately be able to support these zero emissions vehicles. There are too many brown outs and black outs across the country that put citizen's lives in jeopardy and the electric grid cannot handle the strain of pushing these vehicles on our citizens at this early date. Putting all of your 'eggs into one basket' is never a strategy that is successful - we need to have all possible energy sources so if one suffers or fails the others can pick up the slack.

Sincerely,
Cynthia Oliveri
