Subject: Subject: Zero emission EV mandate

I attended the budget hearing in which you said that you would "consider" the desires of Delaware citizens with regard to the California zero emissions mandate. Apparently consider equals ignore. Stop trying to turn Delaware into California that is obviously failing in its representation of its citizens. All of our counties are in compliance with federal air standards. Your statement that we are in compliance but the PA monitoring station is not and that somehow that is Delaware's fault makes no sense. Two plus two still equals four. In compliance air from Delaware cannot contribute to out of compliance air in PA. Your other reason for this change to all electric vehicles is that it will make more EVs available (as you stated in your budget presentation). Nonsense.....they are already available. Unfortunately charges are NOT. EVs are fine for those who live in a city but us rural individuals will be out of luck .
