Subject: Concerning Issues

The Honorable Shawn Garvin,

We oppose any move by Governor Carny to adopt California's clean air initiatives/policies due to the financial burden it places on families and employers.

We also know the infrastructure to support the EV is wholly inadequate, the lithium batteries are at least unsafe and expensive to replace.

Strides have been made in pollution reduction in gasoline and diesel engines and there are other engines being developed, like hydrogen, that may be an alternative to fossil fuels.

As a matter of scientific fact, every effort America uses to reduce our carbon mark on the environment is negated by the increasing pollution of China and India. Pressure must be applied to these countries to dramatically reduce their pollution. I think we are rushing ahead way to fast. Our state and national government isn't weighing all the evidence fairly due to political pressure being applied and spending too much on these efforts without considering the economic damage and the unintended consequences involved.

Please send me any other information that will keep me informed on these matters. I do support a reasonable approach to clean air.

Thank you,

Steve
