Subject: EV Mandates

“Road to Perdition”

Please stop this extreme left driven push for electric cars. Your illegal mandates through incompetent DNREC make no sense to me, a chemical engineer with nearly forty years in the energy business INCLUDING BATTERY TECHNOLOGY.

Lithium batteries require destruction of the environment to mine their raw materials. Also the power grid lacks capacity to supply the increased demand for charging cars - massively increasing pollution from power stations trying to do so. Finally, the most abundant and environmental friendly battery is driven by hydrogen, not lithium that mainly benefits China.

But citizens clearly understand that it has NEVER been about the environment. Radicals want to “burn down what exists, to rule the ashes!” We are well aware of their goal after witnessing the deliberate mass-destruction that has been orchestrated by DC during the last three years.

Stop destroying our beautiful country at the expense of its citizens. Help us defy extreme right and left destruction of the greatest freedom experiment in all of history.

Thank you for taking time to read my concerns.
