To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

You people are out of your minds. First electric cars run on electric which requires power plants to produce....green house gases. Second electric cars require a battery that if it goes bad cost at least 10k to replace oh and no one has figured out how to dispose of them yet...pollution. What effect does airplane traffic ships and rail traffic play on green house gases? Do away with gas.....loss of tax revenue who makes up for that us? Refineries pump crap into the air at an alarming rate but we won't shut them down. Will shut down gas stations putting people out of work and business that will be great for the economy. The president flies home like every weekend what's the effect on the ozone layer everytime he flies? Again you people are out of your minds California is about the worst state to follow example of. Is our governor capable of coming up with his own ideas? This like gun control will cost politians jobs and money. Good luck
