Good evening,

I would like to submit my vote for NO in moving forward with this. There is no reason that we have to conform or follow a California perspective. We are not CA or want to be FORCED by someone who decides what vehicle we can drive, when, and what our choice should be for how to fuel it!

This whole EV movement has been too quick and not thought out well enough. There are so many things that are not in place for everyone to go EV and most can't afford to.

The government is supposed to work for the people and not mandate what "they" think we should do. They implement what the people want, and need to remember that.

Again, I vote NO to moving forward with this CODE 1140.
