Electric cars

To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

Dear Sir,

As ideas go, I cannot think of a more irresponsible idea than Delaware being compared to California. The state, population and most importantly, the emissions have NOTHING in common! The emissions in Delaware are at the bottom of your own chart!

This is possibly the most expensive suggestion that has ever been made. Just the production & maintenance of the battery is ridiculously high, not to mention the amount of pollution created as well as the serious medical implications of all who mine or live near lithium mines. There is NO GOOD REASON for Delaware to join in this fiasco of being compelled to buy an electric car. We don't even had the grid to support it!

In addition if two of these cars collide, there could very possibly be an explosion! If they get wet, they start a fire!

Please do the right moral & fiscal thing and stop this madness.

Sincerely

Ann Albosta
