

Electric cars

To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

I am very concerned about this California mandate/law for electric car use that is being pushed in Delaware..

Purchasing an electric car is an enormous expense. I have so many questions:

Will the price of these vehicles decrease?

How are the batteries being disposed? Will they end up in land fills? I believe this would have a huge effect on the environment.. and then a huge cost to have them become environmentally safe.. a cost that Delawareans would have to pay.. The cost of replacing tires is another huge expense.

Where and when will they have charging stations?

Who will have to pay for these charging stations? Gas stations might and then they would pass the cost onto the consumer.. If there is a traffic jam, which we have seen, how will these cars who no longer have electric be removed from the highway?

Will you need to have special equipment to come out to the disabled cars and charge the car? Would they have to do one car at a time? What would the car insurance cost?

How safe are these cars on the road??

Delaware doesn't seem to have a long term plan with a gradual change from gas to electric.. The state of Delaware has some serious concerns to look into before making this a cut and dry law.. following any ideas from the state of California, including this electric car mandate, from a state that has huge citizen issues both legal and illegal scares me to death..
