Electric vehicles

To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

I am emailing you on behalf of my husband and I and many other Delawareans who are concerned about DE phasing out and banning gas/diesel vehicles. This option is not affordable to many people with children. Electric vehicles are too small and not safe for families with children in car seats. We only have two kids in rear facing seats and have a hard time fitting them in our smaller car. If you have anymore kids or are taller than me you definitely need a bigger SUV, and the bigger the car the bigger the price tag. Many middle class (not government qualified) people cannot afford $80k for an electric SUV. And I highly doubt they will be any cheaper by then. Also as we all know it but pretend not to address, electric vehicles are really not any better alternatives. Thank you
