To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

To whom it may concern,

I would first like to thank you for allowing public input on such an important situation. Secondly, I would like to say that I am extremely opposed to this bill. It is not constitutional to require that someone purchase a certain vehicle just because some rich man says he needs everyone to contribute to his ideas. The argument that electric vehicles are better for the environment are missing a crucial part to the big picture. Where does that electric come from? It comes from coal burning plants, from fossil fuel!! It is a lie and tactic of deception to push electric vehicles on everyone for the "good of the environment." Not to forget the impact on the power grid that this would have. There is absolutely no way our power system could handle something like this, especially when a state as large as California couldn't keep up with their own!! I ask that law makers look at the ENTIRE picture and do not put this bill into action.
Sincerely,
A concerned citizen
