To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

I think it would be beneficial for the state and the people of Delaware if the state would give to each family in the state an electric vehicle. This would greatly improve the environment and make sure people could get around. This would also help the world because it would lower the price of the cost of a barrel of oil greatly.
There fore it would make it lest costly for the rest of the world to travel much cheaper. This would make us feel like we have done the right.

Thank you very much
Keep up the great work
Thomas R. Kida
