To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

I offer the following comments regarding this topic:

- I am all in favor in taking action to improve the environment.
- Anything proposed needs to be in a measured and doable fashion
- The proposed time frame is way too fast
- We cannot provide enough electricity to satisfy demand we currently have
- Coal generator plant was kept operating to help satisfy demand
- Technology is not here yet as evidenced by all the electric cars that catch fire
- Batteries depend on raw materials provided by China - unacceptable!
- Delaware will never have enough charging stations in the proposed time frame
- Legislation of this nature will only serve to influence people to not move to Delaware
- I cannot believe the governor believes he has authority to do this
- How come this is just coming to light after being proposed in March

I am not sure what can be done to stop this, but it needs to be stopped. Has anyone analyzed the ramifications of this being put in place?
