To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

My public comment and concern is basic, first of all we are not California !

Instead of following we should lead by example. That being, for our states energy needs all the above approach until Private Enterprise & Entrepreneurial creativity lead the way with a free markets in energy that will provide the economy with cheap clean fuel production with new technologies that will make solar & wind look ancient !

Government intervention in regards to regulations on technology within the parameters of transportation or any others as a matter of fact is a bad idea hence setting unrealistic goals (2035) for an unproven industry seems like a fools errand to me !

I've been a resident here for 15 years and I am extremely disappointed in the past legislative outcomes from the Covid period up to now in regards to civil liberties and unconstitutional mandates as well as Woke agenda's ! This idea here is just another example of government going too far !

POINT: We will get there with a more common sense approach and let the market forces prevail. E.G. tax something less, you get more of it,regulate less you get more growth, better economy will provide better ideas along with technology thus creating better environmental results for the people of our state.
