I am NOT in favor of this. I drive a lot for my 3 jobs. On average I drive 200 miles a day often in rural areas with a time deadline. I show houses, I deliver food and products and drive in the early morning to work at my 3rd job this could be a safety issue for me I'm a single female traveling to work at 2 am what if my car ran out of power do you even know what its like in our state? I can't even stop for a cup of coffee on my way to my middle of night job, it's dangerous to. This will affect my income which right now isn't even enough to cover the bills I HAVE to pay. are there gonna be charging stations installed every mile in the county? And state?
