To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

I am totally opposed to this proposal. Fossil fuels are readily available and efficient. Carbon Emissions have been greatly lowered. Gas and diesel fueled cars can be driven long distances without the need to be charged which is time consuming. When storms affect the grid: then drivers are told they can't charge their The lithium batteries in electric cars are made from rare earth metals which must be mined: often by slave or juvenile labor. Lithium batteries as evidenced in Florida during Hurricane Ian, when cars were flooded with salt water can burst into flames which are difficult to put out and highly dangerous. Finally, electric cars are expensive to purchase and replacing the lithium batteries is very expensive as well. Democrats always say how they care about low income families. This proposed adoption of California's Advanced Clean Car Standards which will impact those who struggle to make ends meet the most shows they don't.
