To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

I am writing in support of Delaware adopting the ACC2 standards. I recently attended 2 of the zoom workshops and I would like to commend the staff on their very professional presentation and dealing with, to say the very least, rude people.

It is disappointing to hear people being so misinformed about climate change.

Climate change is a very real problem and we all need to do whatever we can to help alleviate it. So I support going to the ACC2 standard. The health benefits will also be a big improvement in Delaware.

It is important that this and other programs in Delaware are fair and equitable, As there are many under privileged people who are caused to suffer. So I hope that everything that can be done to ensure equity is carried out. I also hope that you spend some time and effort to improve mass transit as well as pedestrian and cycling accessibility. Having as many cars on the road in the future even if they are electric is not the best solution. Reducing the impact by improving mass transit and bicycling infrastructure would also help.

Thank you again

Cheers
