Kyle,

I am a licensed Master Electrician in DE & NJ and understand the grid from the type of work I have done in the past. Why are we trying to shove this forward in such a rush WITHOUT the electric infrastructure in place let alone the disposal / recycling of gross amounts of the battery packs in the future with no plan. We also don't look at the fact of travel. The additional weight the EV's add more wear and tear on the roads and bridges.....have we taken that into consideration. What about the family that wants to travel to Ft. Meyer, FL and plans to drive straight thru, the technology is not there to allow it. And lastly, maybe I just don't want an EV and like my gasoline or diesel powered pick-up truck.....more government intervention and over reach forces me..... As an American citizen with a family who has fought in the Revolutionary War and lived here for over 300 years.....so much for choice WITHOUT government telling me what to do.

I just think we are rushing into this without thinking it through thoroughly.
