The United States has over 300 years of the most efficient energy under our feet, for the Democrats, that is the ground. The most efficient way to switch from fossil fuel to what you want to force on us is for a company to find that they can make money. Let things work naturally and in a few years, enraptures will discover the technology needed to bring the change about without hard feelings and bankrupting and destroying good people and many businesses we need.
The Democrats as usual are bowing to a few ignorant, ill informed people.
