To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

As a resident and taxpayer of Delaware, I am highly opposed to the California clean cars program and federal emissions plan.

1) Battery operated cars cannot run without power from coal, natural gas, or other natural sources needed to make the batteries.
2) Batteries used in battery operated cars will end up in landfills
3) Majority of the population cannot afford a car that is being forced upon them as a means of transportation.
4) There is no evidence that gasoline cars and diesel cars are polluting our air.
5) Airplanes are in the sky everyday releasing chemicals in the air....what are you doing about this.
6) The feds need to stay out of our state, county and local communities. We do not know who is in our federal government right as many have not voted for these people and they are not acting in our best interest.
7) California has been run into the ground. I will not accept policies from another state that has been ill managed by incompetent politicians.
