As a property owner and DE taxpayer I am opposed to the implementation of this program. Having vehicles in multiple states for work, I have encountered similar proposed programs and most have the same issue as California. A poor power grid to sustain the requirement and a high cost for the vehicles to be in compliance. At a minimum the timeline is rushed. The costs alone could preclude many from having a vehicle. Increasing the power grid comes at what cost? Environmental and Economic. Remember the batteries to run such cars are not biodegradable, have a limited life span and are expensive to replace. Is that yet another tax increase for residents?

I, for one, think that we pay too much in taxes already and am not in favor of ANY tax increase to accommodate this program.

Regards,
Bob Steffen
