Dear Sir

I request that you drop the initiative to eliminate gas powered cars by 2035.

I am an owner of an electric vehicle and I am ashamed for the damage I have caused to the environment. The amount of energy to mine the rare earth minerals to make the batteries is 10x the impact to produce a gas powered car. Also the cost in terms of human suffering and death caused in the slave labor that is used to mine these dangerous and hard to get to minerals make me sick to my stomach.

Electric vehicles are not the answer and Delaware is not the state to implement a silly law. You will only chase business and residents from the state.

Look at what a mess California is in. Businesses and people are fleeing in record numbers

Sincerely

Rick
