Dear Kyle Krall,

This email is to inform you of our family's opposition to this rubber stamping of California's emission /electric vehicle law.

We were on 3 of the Zoom meetings asking many questions and giving statistics along with other concerned citizens without answers by the panelists. They said answers were forthcoming, but when?

Since when does the Government dictate commerce as to what they can and can't sell? This will ultimately end up in Court like all the other unconstitutional legislation.

Most people in this State don't even know this is going on. I was told by a panelist they don't have the funds for a mass mailing and it was up to us to get the word out.

They could not properly address the dangers of lithium batteries and made statements like they can be recycled. This is not true. They will cause more harm to our environment, cost much more money, more hazardous in accidents for vehicle fires and a huge inconvenience requiring charging without use of heat or air conditioning, all of which place citizens in danger.

We vehemently are opposed to this Law. At the least, it is unconstitutional. Show me where Gov has the authority to do this.

I look forward to your response and not just a form letter.

Thank you,

Denise Clendenning
