To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

Mr. Krall

concerning the electric car mandate, this is an issue that should never be done via regulation.

**This if it is going to happen needs to be done via law.**

In what planet is having a vehicle that cant tow jack for 100 miles viable? what aobut thos of us that travel 350 miles to events hauling historic vehicles? We go to places there are no charging stations.

In what universe does 500 tons excavating for one battery be environmental? The batteries cant even be recycled.

Are we to be married to the Chinese? We have no ability to produce the batteries needed. Stop sucking up the Chinese.

We live in a state that has no ability to produce the electricity needed for that many cars?

In what universe is making a family barely making it supposed to afford a car at over 45 grand? Or is our governor and his ilk so elitist they dont care?

This rule is nuts plain and simple.

How many gas station and service facilities is this going to put into welfare for loss of jobs and business? Or does the governor not care about those people?

My family and I are totally opposed to this.

Stop this nonsense now.

DO NOT BAN regular cars.
