To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

What about vehicles coming in from out of state? Will they be turned away?

What of construction vehicles

What of farm vehicles

What of transportation vehicles?

The law must be clear and not left for loopholes to be granted by dept of transportation or some other bureaucracy to write!!!!!!

To mandate that citizens be forced to purchase certain vehicles is much like Obamacare.

What about existing vehicles in good condition

What happens to the repair industry and the "junk" stores and repositories? Where will all the " illegal" vehicles go to die

Will there be a buyback program for non- electric

What about charging stations

What about the strain on the electric grid.

What about farms with gas ATV type vehicles

Will these types of vehicles still be allowed for sale

What about the bigger picture and trading with China for all the batteries

And the cost to the land to strip mine the materials and all the diesel fuel and diesel machines required to provide an overly pristine environment

What happens to all the green things that require CO2 to survive and help clean the air and also the decreased production of oxygen

Will there be rebates for the cost of electricity

How will the increased cost of electric affect low income people and others

Will the costs destroy the middle class

That's all I can think of. I look forward to your reply.
