To: Krall, Kyle (DNREC) <Kyle.Krall@delaware.gov>

As a family physician and citizen of the state of Delaware I support the full institution of ACC II. Air pollution contributes to the health burdens of lung cancer, asthma and a myriad of respiratory illnesses causing increased deaths, missed days from work and school, and long term disabilities. Climate change due to greenhouse gas production is already beginning to bring extreme weather, extreme temperature occurrences, flooding and increasing insect born disease.

All of these burdens on our population and our medical response systems are linked to the use of fossil fuels which can be greatly decreased by moving as much of our transportation sector away from this old technology' as possible. Electric vehicles are the current best option to moving in a healthier direction toward a more stable future .
