

Good project design skills can be learned.

We promise.

It seems simple enough. Start with a good idea and everything else will fall into place. Unfortunately, it rarely works that way.

In this virtual, highly interactive workshop, using your idea, you will learn how to design a project that reaches the right audience, has the intended impact, and achieves measurable results. You'll sharpen your information gathering, project planning, and evaluation skills, and walk away with the ability and confidence to build in the accountability and strategic thinking needed to achieve project success.

While you are encouraged to attend with your project team members, attending as an individual is just as valuable.

Last day to register: 6/7/2024

Space is limited to 30 people and a total of 12 projects

All workshop information can be found on The Campus, a learning management system. Registrants will receive login instructions for access to The Campus two weeks before the training.

Virtual Workshop: June 25-27, 2024

Registration: Please use this [link](#).

Host: Lynne Pusey, Delaware National Estuarine Research Reserve

Please plan to attend all workshop sessions.
