DCMP

DELAWARE COASTAL
MANAGEMENT PROGRAM

Background

- DCMP is a cooperative program between the State of Delaware and NOAA
- Balances coastal resource use, economic development and conservation to coastal hazards, habitat protection, coastal development, water quality, public access, energy facility siting, and ocean planning.
- Coordination between Remediation and Coastal following 2019 workshop

Sustainable Resilient Remediation

Project of Special Merit Goals

- Increase the resiliency of remedial actions approved by the State and/or reimbursed by the State's Brownfield Program.
- Planning and mitigating the ongoing and future climate and sea level rise impacts on contaminated sites within the CBR4 project area.
- Incorporate the input of the surrounding community and strengthen stakeholder involvement within the remedial process.

Objectives

1. Conduct a vulnerability assessment of contaminated sites to climate change, including the impacts to disproportionately affected populations.
2. Evaluate mitigation approaches to address the impacts of climate change at contaminated sites within the CBR4 project area.
3. Develop a strategy to build resiliency into environmental remediation and restoration within the CBR4 Project Area.

Estimated Completion March 2025
