Subject: Wind Power comment

Please look into what Scotland has achieved with wind power. They have floating wind mills in the North Sea. They are also doing current (under water) electric turbines. Denmark is another country using offshore wind mills. The Germans have produce so much solar electric that they have been able to shut down 2 nuke plants. We should have solar panels on every chicken house. Solar is now cheaper than oil, gas, and nuke when you take away their subsidies.
