We received this comment about the offshore wind working group, and I realized I never passed it on to you. Should I have him contact you directly, or is this okay?

I heard on the radio that your committee met recently to discuss the potential environmental and economic development benefits to Delaware from offshore wind energy development, and to discuss employment opportunities in the field. I am throwing in my hat in favor of wind.

I want to work in the field as a wind turbine technician. I will be studying Electro-mechanical support at Del Tech this spring (2018) towards working in the wind field. After that, I plan on going to wind turbine support school and rope access school.

My fear is that I will be trained but will have little opportunity to work in the field because of my age and because of the time it takes to get a wind project off the ground. But you're welcome to put in your December report that you will have one wind turbine technician ready to go when that first turbine goes up!

So please speed up the process and bring more wind to Delaware. Thank you.

Warm regards,

Will Stephens
